

Epson STYLUS PHOTO R2400

New UltraChrome K3 Ink Set

Introducing a major breakthrough in ink development, the STYLUS PHOTO R2400 features the new Epson UltraChrome K3 pigment ink set. Based on a newly developed pigment ink formulation and incorporated in all eight cartridges - Cyan, Magenta, Yellow, Light Cyan, Light Magenta, Matte Black (or Photo Black), Light Black and now a Light, Light Black - the new formulation delivers an increased colour space covering nearly the entire gamut.

Epson's UltraChrome K3 Ink

Generic Pigment Ink

For users demanding absolute perfection in black-and-white prints, the introduction of the Light, Light Black ink brings with it the ability to generate prints that exhibit outstanding greyscale and image contrast.

Adding further to the benefits of the STYLUS PHOTO R2400's UltraChrome K3 Ink set is the new encapsulating resin for enhanced print glossiness; and the dramatically decreased metamerism, producing prints with colour tones that achieve almost equal colour consistency when viewed under various different light sources.

Epson STYLUS PHOTO R2400

Individual cartridges

With eight individual Epson Intellidrive Ink cartridges featuring new UltraChrome K3 Ink, the STYLUS PHOTO R2400 delivers outstanding photo printing capabilities. The printer will even pause printing during a job, prompt the user to replace an empty cartridge, then continue printing without missing a beat. With eight individual cartridges, the STYLUS PHOTO R2400 is designed to enhance productivity and minimise waste.
